

Blue's VoiceMemory

Your personal call recorder.

Records telephone calls on your PC in MP3 format

Blue's Voice Memory stores your calls directly on the hard driver of your PC in MP3 format, thus ensuring high quality audio files (recording and playback).

The software can playback the recordings or store notes and name each file.
The recording can also be password protected, for more privacy and security.

Connects to any telephone

Blue's Voice Memory, connects to the handset of any analogue, IP or digital telephone. It is available in two versions: for handset or for analogue trunk line.

Comes with all necessary cables. In a few simple operations, connect it to the telephone handset and to the microphone input of your PC: your personal telephone recorder will start working immediately.

Keeps trace of any agreements

Blue's Voice Memory gives you the chance to record your phone calls and keep trace of them in a very simple way.

Connect your fixed telephone to the PC by means of Blue's Voice Memory. You will thus add new functions to your daily work tools.
A single button will enable Blue's Voice Memory to record all your telephone conversations or just when you need to record them.

Essential ed cost effective

Blue's Voice Memory is cost effective and ideal for professionals, managers and anybody willing to keep trace of the telephone conversations.

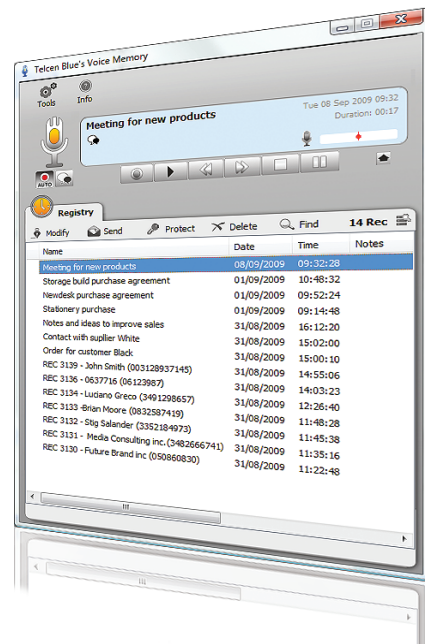

Try it now and you'll keep on using it!

Blue's VoiceMemory

Enhance your work with Blue's Voice Memory. Find out how.

- Records telephone calls on your PC in MP3 format
- Keeps trace of any agreements
- Sends recordings via e-mail
- Compatible with any telephone set
- Automatically associates contact information to the recording thanks to Blue's One CTI TAPI

Records automatically

With a single button, Blue's Voice Memory records all your telephone conversations automatically or can be activated at the right moment. Just place a phone call as always and click a single button to start recording.

Integrated with Blue's One-CTI

Blue's Voice Memory integrates with Blue's One and starts recording every outgoing or incoming phone call, while automatically associating the telephone number to the name of the person (present in your phonebook)

Sends MP3 files via e-mail

Blue's Voice Memory software is capable of sending recordings via e-mail, thus sharing agreements taken with your interlocutor.

A single click will automatically create a new e-mail and attach the MP3 file of the recording. The name, date, time and notes of the conversation will be added automatically.

For handset and for analogue trunk line

Blue's Voice Memory is available in two versions: a device connects to the handset of your telephone (analogue, digital or IP). Or, you can connect a device to the analogue trunk line (e.g. Cordless or DECT).

Other characteristics

- protection password
- operator name can be stored
- save data onto the network
- automatic noise filter
- notes can be stored
- search tool
- 1 hour conversation in only 14 MBs
- a beep at the beginning of the recording
